

GitHub Profile Card

GitHub provides an api for users, avatars, bio, repositories, followers, following, popular repos, projects, and more. Let's build a GitHub profile card webpage.

API Endpoint: <https://api.github.com/users>

API Docs: <https://docs.github.com/en/rest>

Next.js Docs: <https://nextjs.org/docs/getting-started>

React Docs: <https://reactjs.org/docs/getting-started.html>

Requirements:

- Framework: Next.js (<https://nextjs.org/>)
- UI/UX is up to the developer
- User should be able to search GitHub profiles
- Homepage should render the user profile specified in the URL, if any
- App should implement it's own /api to access github API with a personal token (<https://docs.github.com/en/authentication/keeping-your-account-and-data-secure/creating-a-personal-access-token>)
- Code must be hosted in a GitHub public repo
- Branches: `main` and `develop`
- Code must be reviewed by `wronfim` user
- Code must be merged into `main` via Pull Request upon code review approval
